SKILLS

Backend & Languages

TypeScript, JavaScript, Node.js,
Express, NestJS, REST APIs,
GraphQL, Event Sourcing

Databases

MongoDB, PostgreSQL, SQLite,
Redis, MySQL

Frontend

React, Next.js, Redux, TanStack
Query, TanStack Start, TailwindCSS,
PWA

DevOps & Testing

Docker, GitHub Actions (CI/CD),
VPS, Nginx, SSH, Jest, Vitest,
Mocha, Playwright

Architecture

Adapter Pattern, Modular Monoliths,
Majestic Monoliths, Service Pattern

LANGUAGES

Swedish (Native)
English (Professional)

CERTIFICATIONS

- MongoDB Developer
- Node.js Deep Dive
- React – The Complete Guide
- Advanced CSS / Sass

YOUSIF ABDULKARIM

Backend Software Engineer

Building modular backend platforms and scalable web applications

TypeScript • Node.js • React • Next.js • MongoDB • PostgreSQL • Docker • Test Automation •
GitHub Actions

PROFESSIONAL SUMMARY

Backend Software Engineer with over 4 years of professional experience designing robust web applications and reusable infrastructure. I specialize in building maintainable systems utilizing clean architecture principles, with a strong focus on modular and majestic monoliths over complex distributed setups. Passionate about engineering excellence, I prioritize rigorous testing, seamless developer experiences (DX), and delivering reliable solutions that drive tangible business value.

PROFESSIONAL EXPERIENCE

Founding Backend Platform Engineer | eridu-tech (Open Source) *(Aug 2024 – Present)*

- Architected and maintain a framework-agnostic backend library ecosystem comprising 30K+ lines of shipped production TypeScript code (100K+ total source lines).
- Designed a modular, composable architecture based on the adapter pattern, enabling seamless integration across multiple runtimes and frameworks (Node.js, Bun, Deno, serverless, and edge environments).
- Built and delivered a suite of reusable backend components optimized for modular monoliths—including HTTP routing, caching, distributed locking, rate limiting, circuit breakers, and an event bus.
- Engineered extensive runtime and database integrations with MongoDB, PostgreSQL, MySQL, SQLite, and Redis.
- Implemented comprehensive test coverage (unit, integration, and database tests) using Docker to provide isolated environments for CI/CD pipelines with GitHub Actions.
- Authored and maintained thorough developer documentation supporting an active developer community of approximately 600 monthly users.

Stack: TypeScript, Node.js, MongoDB, PostgreSQL, Redis, SQLite, Docker, GitHub Actions, Modular Monoliths, Cache, Locking

Lead Software Engineer | FillerDepot *(Oct 2025 – Present)*

- Spearheaded the end-to-end full-stack development of the AMS Portal—a centralized platform architected as a robust modular monolith—to automate event registration for aesthetic medicine companies.
- Mitigated data loss and booking conflicts by digitizing the management of booth reservations, marketing assets, and stage appointments.
- Streamlined operations for both external clients and internal stakeholders by integrating automated invoicing, order tracking, and real-time inventory management.

Stack: TypeScript, React, Next.js, Tailwind CSS, PayloadCMS, TanStack Start, TanStack Query, PostgreSQL, Docker, Nginx, SSH, VPS, DevOps

Fullstack Developer | Stride – Shopify Select Partner *(Aug 2025 – Oct 2025)*

- Collaborated on a three-person development team, taking full ownership of independent tasks and projects.
- Developed core functionality including pagination and contact filtering using the Liquid templating language.
- Engineered a React-based chat widget and successfully integrated it into a customer's CRM system.

Stack: Liquid, JavaScript, TypeScript, React, Remix, Shopify, CSS

Fullstack Software Engineer | Greentake *(Mar 2024 – Aug 2025)*

- Developed a custom e-commerce platform tailored to specific client requirements, featuring a fully integrated Content Management System (CMS).
- Implemented secure user authentication and an automated email invoicing system to streamline the checkout process.
- Drove organic traffic and user engagement by applying responsive, mobile-first design principles.

Stack: TypeScript, React, Next.js, Tailwind CSS, Vendure.js, NestJS, Node.js, PostgreSQL, GraphQL, Docker

Bachelor Thesis – Wasm vs. JS | Bionamic AB *(Jan 2024 – Dec 2024)*

- Conducted a comprehensive performance analysis comparing WebAssembly (Wasm) and JavaScript to evaluate optimization strategies for the Bionamic SaaS platform.
- Benchmarked algorithmic performance, demonstrating that C-compiled WebAssembly consistently outperformed standard JavaScript by 5% to 91% depending on the use case.

Stack: C, AssemblyScript, Emscripten, WebAssembly, Python, Matplotlib, Pandas

Degree Project – REST API Client & SDK | Bionamic AB *(Sep 2023 – Jan 2024)*

- Directed a five-person development team in building a REST API client and SDK for Bionamic, a SaaS platform driving antibody research and development.
- Guided technical strategy and stack selection, utilizing my JavaScript/TypeScript expertise to bridge the gap with the team's existing Java proficiency.
- Mentored the team on complex architectural patterns, effectively onboarding them to the application's event-sourcing architecture.

Stack: REST APIs, SDK Development, TypeScript, JavaScript, Node.js, Express, Event Sourcing

PROJECTS

Outstanding Resumes | Fullstack Developer *(Jan 2022 – Present)*

- Built a modular resume builder using adapter and service patterns to enable seamless code modifications without system-wide changes.
- Designed specifically for modular ("majestic") monoliths rather than distributed systems.
- Features integrated registration via Google OAuth with optimistic UI updates.

Stack: Mantine UI, Next.js, tRPC, React, TanStack Query, TypeScript, MongoDB, Google OAuth, Adapter Pattern

The Primitive Language | Compiler Engineer *(Oct 2023)*

- Built a custom programming language using a TypeScript-based interpreter and recursive descent parser.

EDUCATION

Bachelor in System Development | Malmö University *(2020 – 2025)*

- Core Competencies: Specialized in the modeling, construction, and analysis of sustainable, user-friendly digital information systems.
- Technical Foundations: Gained proficiency in computer science, information technology, programming methodology, and information security.
- Applied Experience: Engaged in a project-driven curriculum, frequently collaborating with industry partners to solve real-world challenges.
